

## Instruction Videoconferenceroom – Media Technology

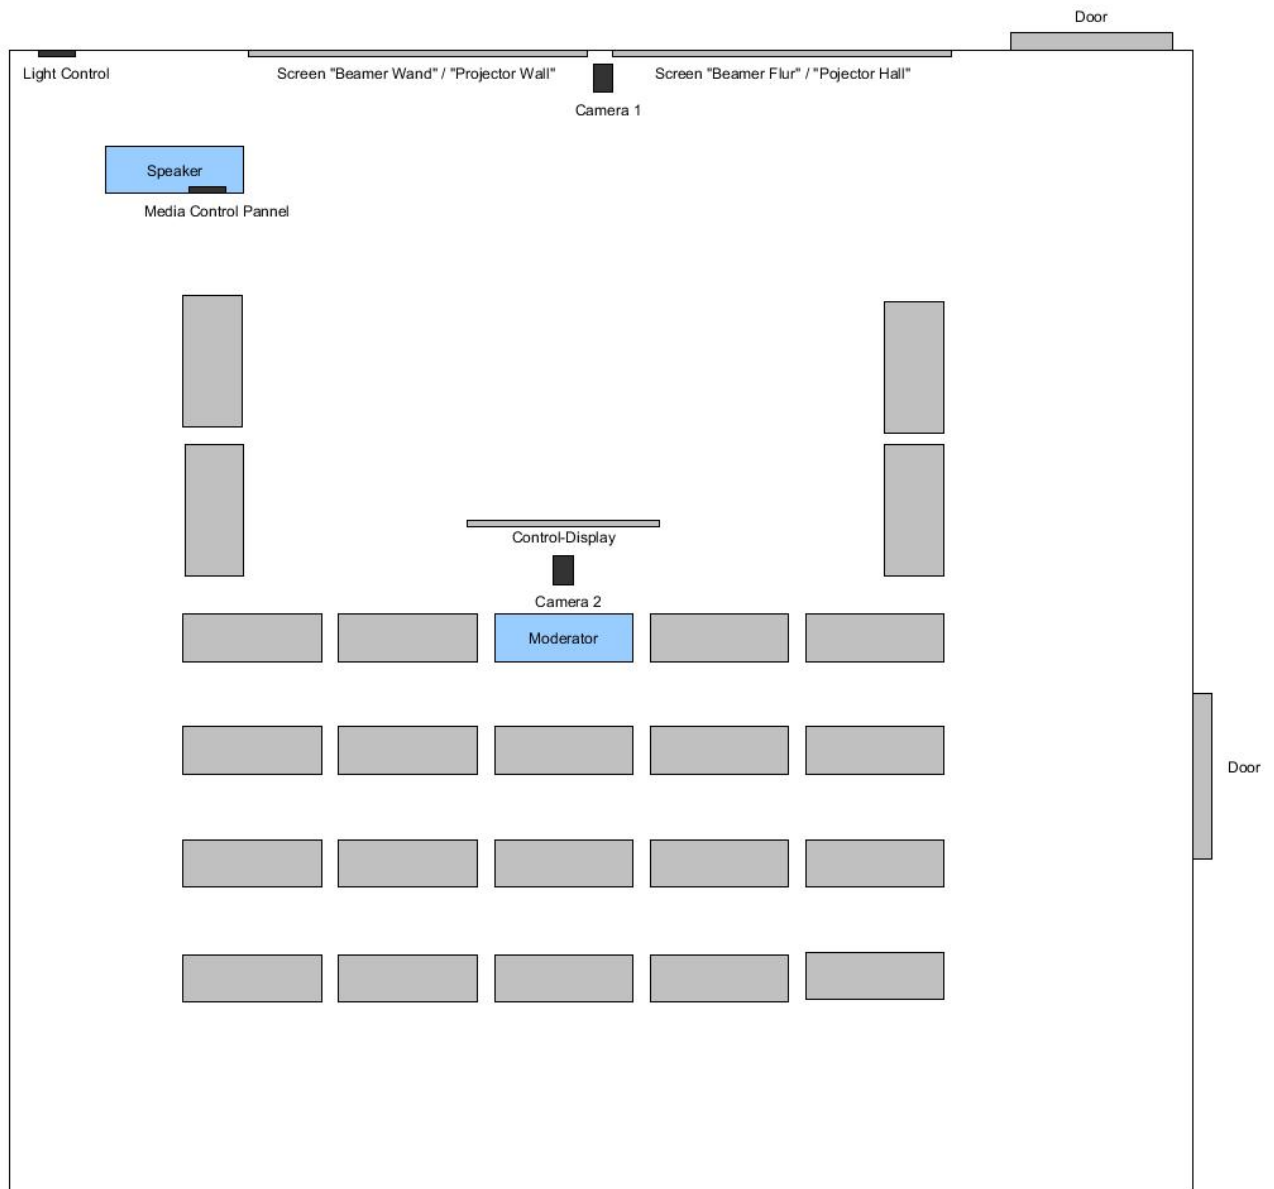

Figure 1: Overview Videoconferenceroom

All of the media technology within the room can be controlled via the control-touch-display at the speaker's seat.

To turn on the technology just touch the display (see figure 2: turn on the media technology and figure 3: start of the media technology). In addition, there are two possibilities to start the technology with specific presettings.

1. **Preset Videokonferenz** – settings for a videoconference
2. **Preset Webkonferenz** – settings for a web conference

figure 2: turn on of the media technology

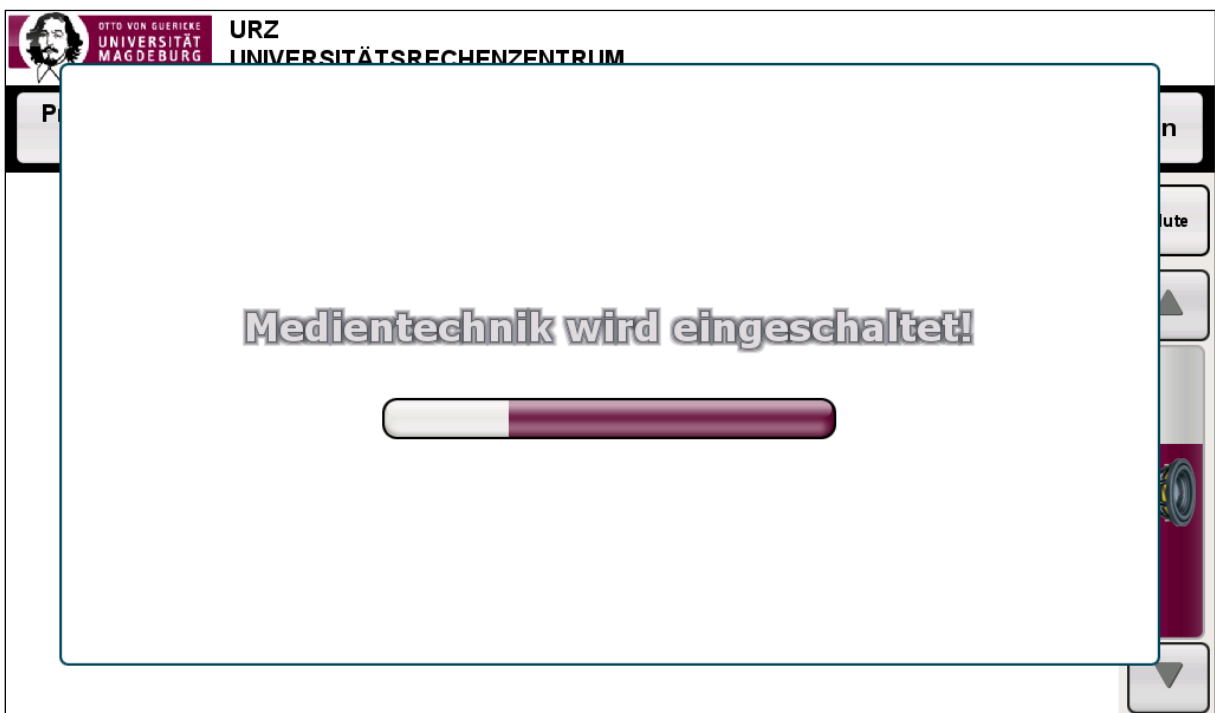

figure 3: start of the media technology

Every element (e.g. projectors, control monitor, conference units, ...) has its own view box, where you can make corresponding modifications.

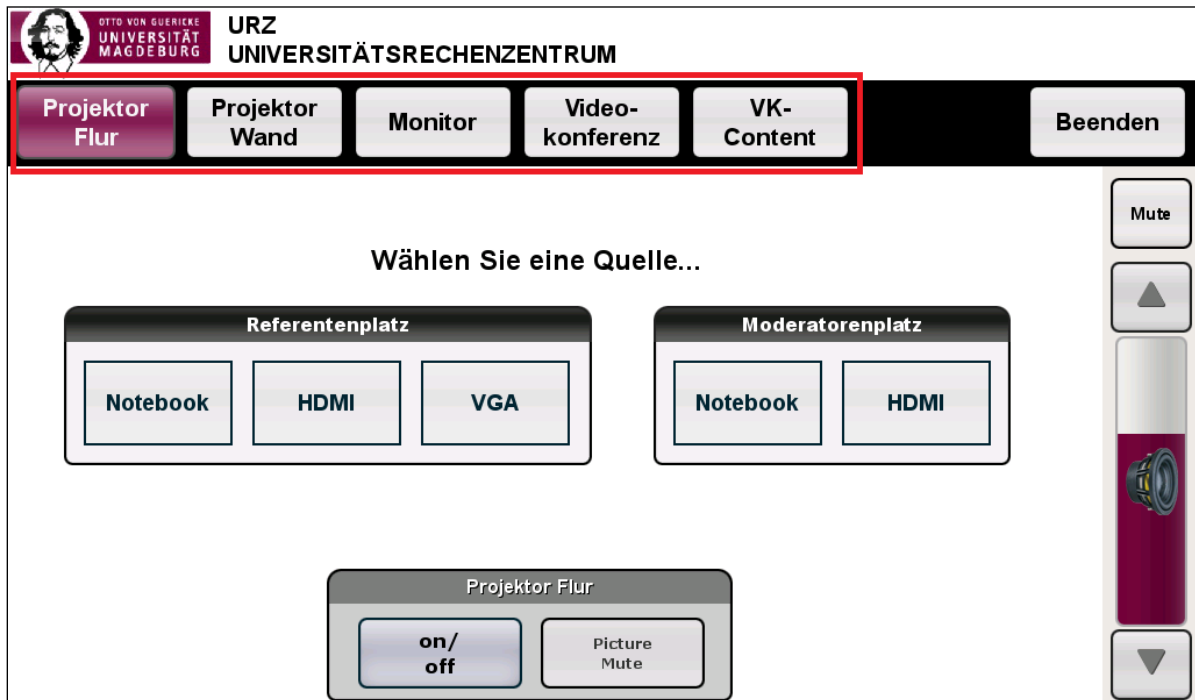

Figure 4: Quellenwahl - Projektor Flur

There are the same choices for both projectors, where you can choose the source for the particular projector (figure 5).

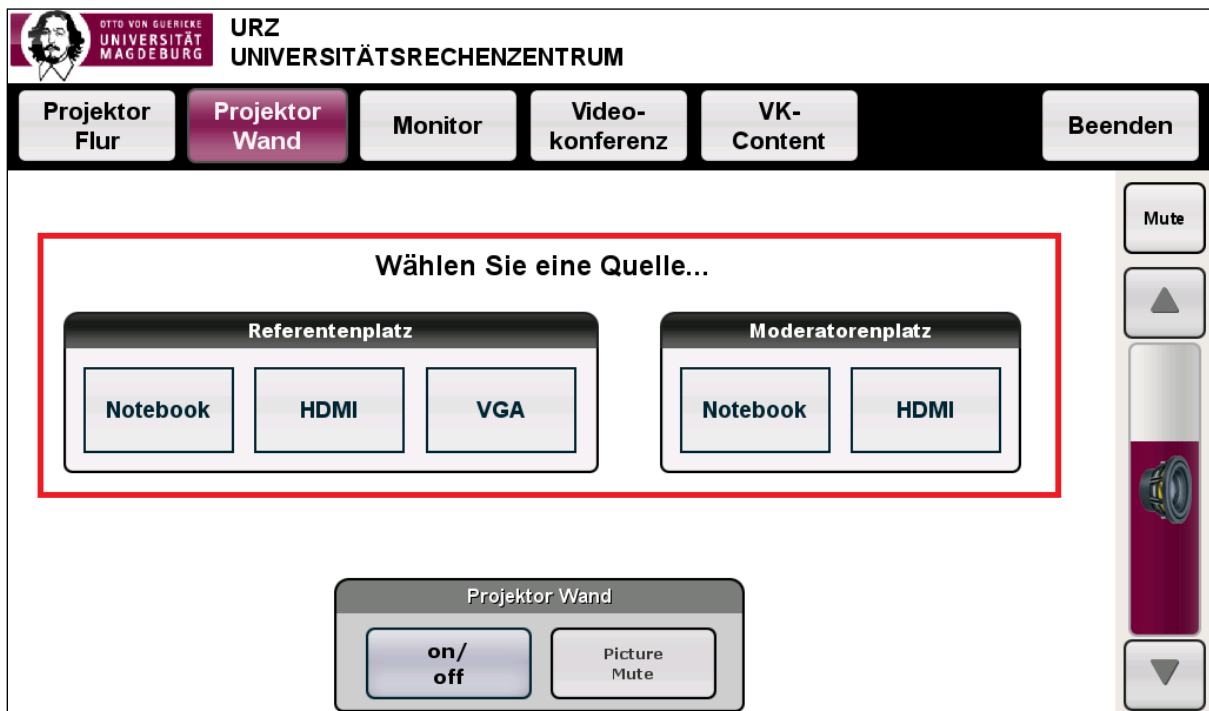

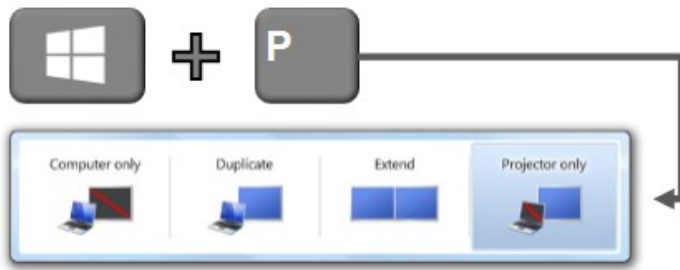

Figure 5: Quellenwahl - Projektor Wand

Note: Adjust the settings on your source/device to „duplicate“ or „extend“, so that you can show contents via the projector.

The source choice of the control monitor is extended by the display possibilities of the videoconference unit (figure 6: source choice control monitor).

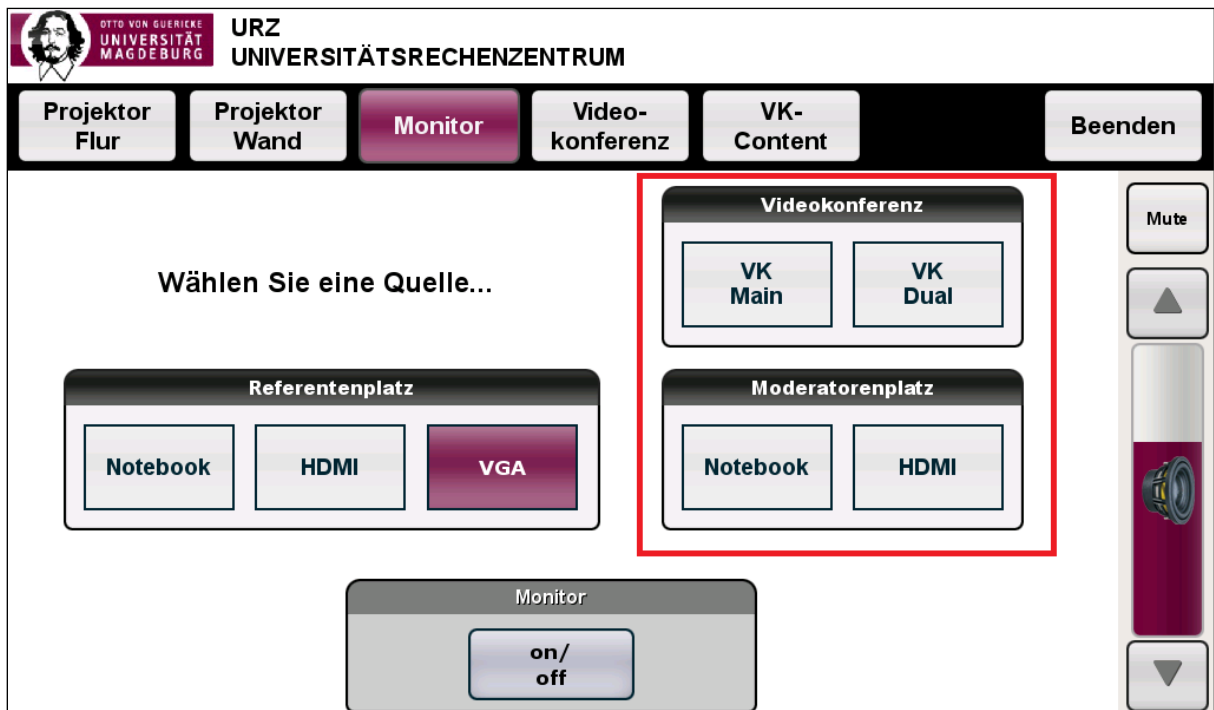

figure 6: source choice control monitor

The menu items „Videokonferenz“ and „VK-Content“ are specific menu items for controlling the conference unit.

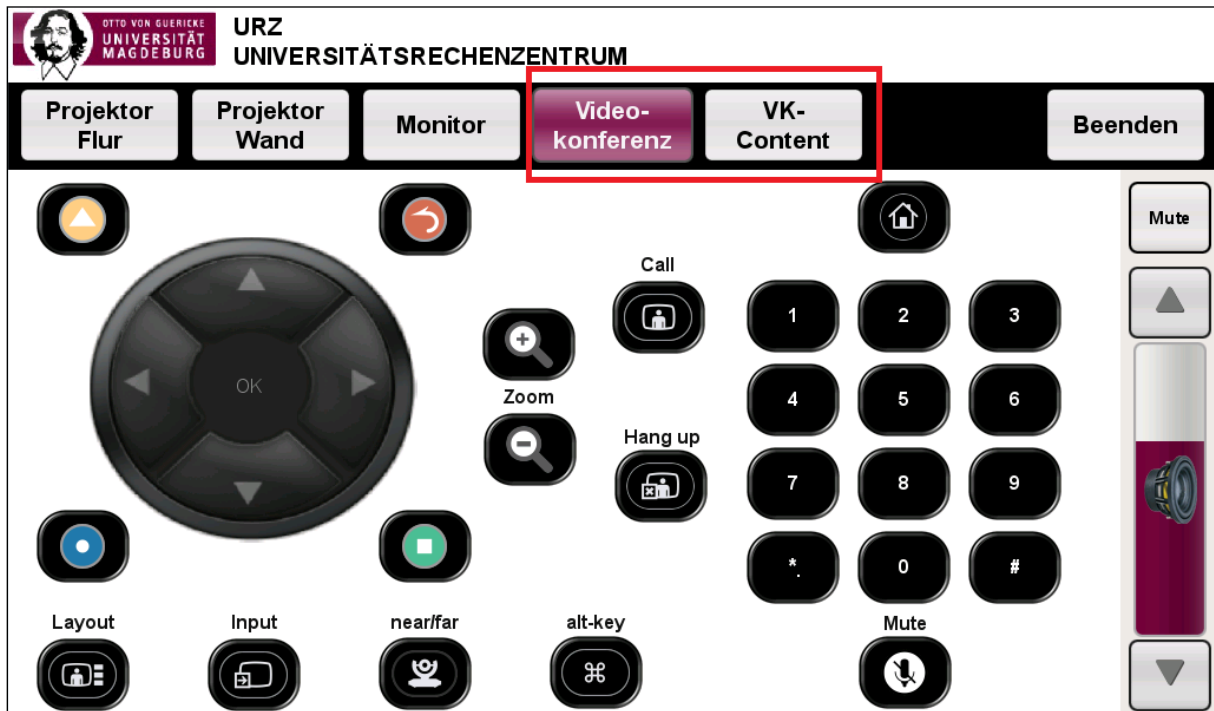

figure 7: Videoconference

The features under the option „Videokonferenz“ (figure 7) are the equivalent to the remote control of the conference unit. For further information, read the document **Instruction Videoconference Room – Videoconference Unit**.

Contents like presentations can be transferred to the opposite side of the current videoconference under the option “VK-content” (figure 8).

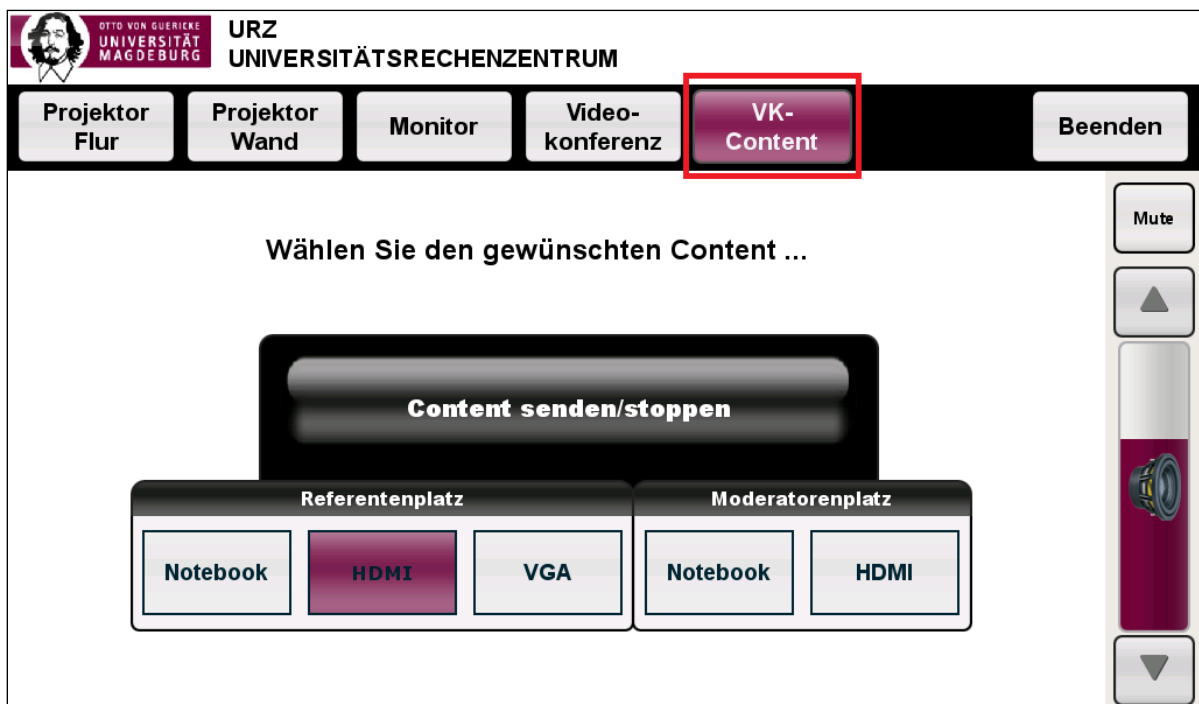

figure 8: VK-Content

To turn off the media technology press the button „Beenden“ and confirm the following window with „ja“ (figure 9).
