

Instruction Manual CiscoMeeting Desktop-App and WebRTC-Access

Client

The software can be downloaded from the website, depending on the system.

<http://www.urz.ovgu.de>

WebRTC

Platforms for which there is no client available (e.g. Linux distributions), can use the WebRTC access without any functional or optical losses. Therefore, you have to open the following website:

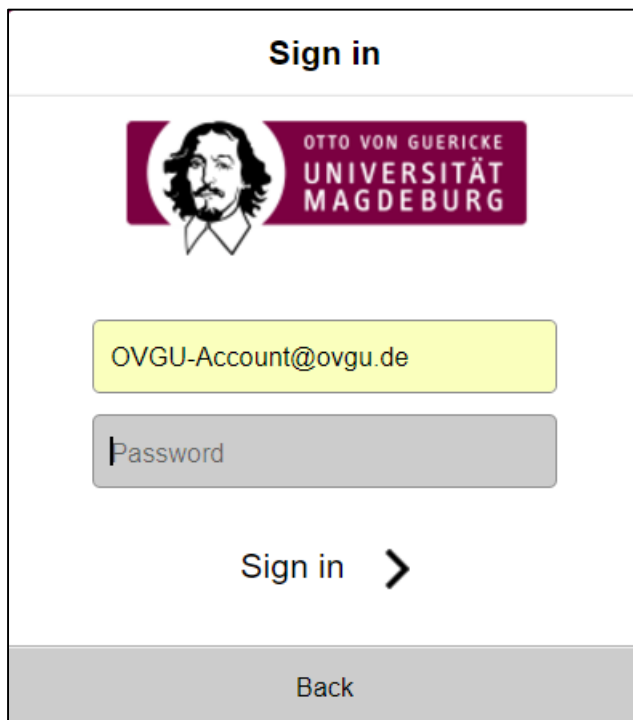

<https://connect.ovgu.de>

It's a precondition to use one of the two recommended web browsers: **Google Chrome** or **Mozilla Firefox**.

Login

The login happens with the data of your central OVGU-account.

Important: You have to add “@ovgu.de” to your username (see Figure 1: Login with OVGU-account).

The image shows a login interface for Otto von Guericke University Magdeburg. At the top, it says "Sign in". Below that is the university's logo, which includes a portrait of Otto von Guericke and the text "OTTO VON GUERICKE UNIVERSITÄT MAGDEBURG". There are two input fields: the first is for the username, containing "OVGU-Account@ovgu.de", and the second is for the password, containing "Password". Below the input fields is a "Sign in" button with a right-pointing arrow. At the bottom of the form is a "Back" button.

Figure 1: Login with OVGU-Account

User Interface (Client or WebRTC)

Regardless if you use the client or the WebRTC-access, the user interfaces are identical and don't differ neither in functions nor in the display. The only difference is the history, which is saved locally on the system. In Figure 2: Graphical User interface you can see the user interface with the selected „Spaces-Tab“.

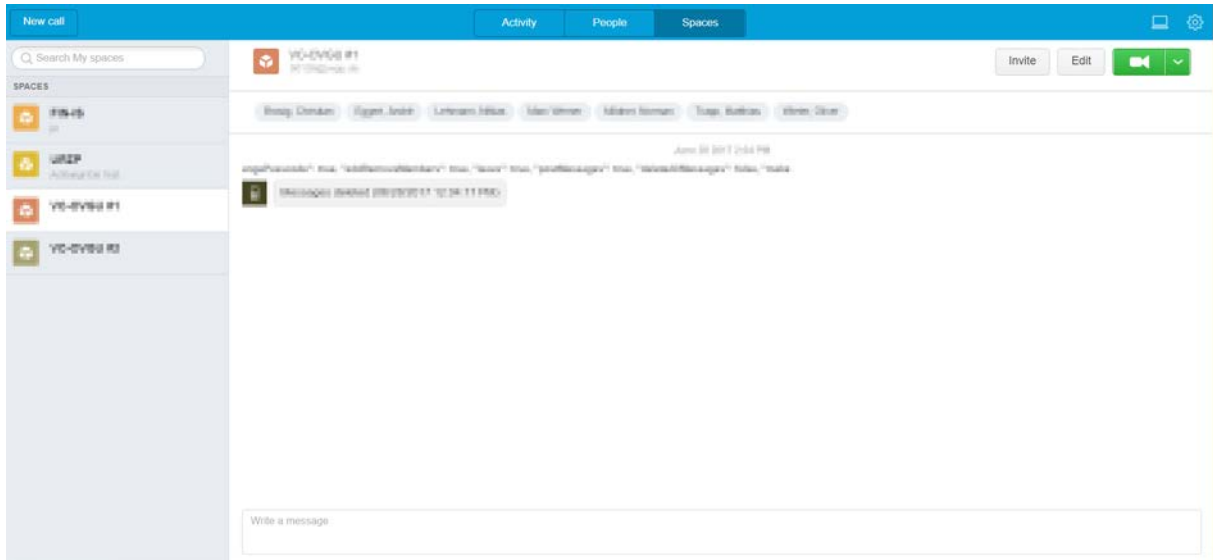

Figure 2: User Interface / GUI

The user interface is separated in three categories. There are the following possibilities in the blue bar at the upper edge of the screen:

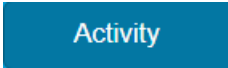

1. New Call

A blue rectangular button with the text 'New call' in white.

Here you have the possibility to make a new call. The data to be entered should be known (e.g. given information by your conversational partner).

Note: Calls to telephones of the OVGU and to external phones (e.g. mobile phones) are currently not possible.

2. Activity

A blue rectangular button with the text 'Activity' in white.A blue rectangular button with the text 'People' in white.A blue rectangular button with the text 'Spaces' in white.

Here you can see past activities (e.g. chats, videoconferences,...).

3. People

A blue rectangular button with the text 'Activity' in white.A blue rectangular button with the text 'People' in white.A blue rectangular button with the text 'Spaces' in white.

Under „people“ you can see saved contact information. Furthermore, under search you can look for other members of the OVGU.

4. Spaces

A blue rectangular button with the text 'Activity' in white.A blue rectangular button with the text 'People' in white.A blue rectangular button with the text 'Spaces' in white.

„Spaces“ are virtual meeting rooms, which can be used for multipoint conferences, communication within working groups, etc. If you require an own “space”, a colleague of the

it-service will be at your service (Mail: it-service@ovgu.de, Web: <https://urz.ovgu.de/ticket>;
Tel: 0391 67 58888).

5. Configurations

Here you can change the audio- and video settings. The presettings use those components, which are set in the system as standard device, which in most cases should fit without any changes.
